Product: Ascom i62

802.11 a/b/g/n compatible
Support for graphical messaging
Interactive, color-coded messaging
Color display
Alarms & positioning
Centralized management

## ASCOM i62 – WHEN INTEROPERABILITY AND INTEGRATION REALLY MATTER

### Unique .11n performance

As one of the first VoWiFi handsets operating on an 802.11n network, the Ascom i62 is truly unique. It supports deployment of voice over the network without degrading the performance of an existing .11n network capacity.

### Superior interoperability

As well as trouble-free WLAN vendor interoperability and scalability, the Ascom Solution has the capacity to integrate and communicate with a comprehensive range of external sources.

### Streamlined administration

When it comes to system administration, our web-based Centralized Management system offers many benefits. Over-the-air updates reduce the workload of administrators and centrally stored settings simplify phone replacement and shared handset scenarios. As well as representing continuity and peace of mind for administrators and handset users, this provides increased value.
